

QC AUDITOR HANDBOOK

How to work the review queue: what every field on a card means, when to fix it yourself, when to flag, when to file a trailer issue — and the rules that stop you auditing your own work.

ROLE: QC

13 CHAPTERS

READ BEFORE YOUR FIRST SHIFT

01 WHAT QC IS FOR

Nothing leaves this system without a human having looked at it. That human is you. A team member's ticket is only "done" once you say so.

What lands in your queue

STATUS	HOW IT GOT HERE	WHAT'S DIFFERENT
PENDING QC	The team member satisfied all five readiness rules.	A first look.
RESOLVED	You (or another QC) flagged it, the team member fixed it and resent.	The card carries a purple “Previously flagged for — verify these fixes” panel with the old flag and its note. Check <i>that</i> first.
EXCEPTION REVIEW	The team member hit a wall and escalated instead of fixing.	Red border, their written reason at the top, and Approve is relabelled Force Approve .

The five readiness rules

These are what got the ticket to you. They are not your audit standard — they're the floor, not the bar. Knowing them tells you what the system already guaranteed, so you can spend your attention on what it can't check.

1 Registration verified.

2 Inspection paper verified *or* Sticker verified — either one.

3 BOL present.

4 If the load needs a scale, the scale ticket has been received.

5 PTI passes — the master PTI box is ticked, *or* it's a LOT trailer whose last PTI is under 7 days old.

WHAT THE SYSTEM CANNOT CHECK

That the sticker photo is legible. That the weight matches what the driver actually texted. That the PTI video really showed the light test. That the KPRA group matches the destination. Those are the things you are here for.

ABOUT THE SCREENSHOTS IN THIS BOOK

Truck numbers, carriers and names are practice data. If your computer uses a light theme the colours will be lighter than shown — every control is in the same place.

02 YOUR SCREEN

Sign in with the username and password your manager issued. You get every page the rest of the team gets, plus two of your own.

The image shows a sign-in interface for 'UGL TRAILER CHECK'. At the top is the logo, which consists of the letters 'UGL' in a bold, white, sans-serif font, with 'TRAILER CHECK' in a smaller, white, sans-serif font below it. The logo is set against a red, stylized background that looks like a checkmark or a piece of a trailer. Below the logo are two input fields: one for 'Username' and one for 'Password'. Both fields are dark blue with a lighter blue border. Below the password field is a red button with the text 'Sign in' in white. The entire interface is centered on a dark blue background.

SIGN IN The first sign-in of the day can take 10–30 seconds while the server wakes. Don't re-click.

QC Review

Your queue. Every ticket waiting on a verdict.

My Audits

Everything you've approved or flagged, dated by when you acted.

New Pickup & Carryover

You create pickups too. Everything in the Team Handbook applies to you as well.

Trailer Issues

The equipment problems you file land here for the whole floor.

Notifications you'll get

- **Red pop-up:** a team member resent a flagged ticket — *“jmartinez resent truck 2277 B after fixes — ready to verify.”* It's back in your queue.

- **Amber pop-up:** a reminder about open trailer issues or missing items on your own pickups.
- **Full-width red bar:** a hazmat-marked truck is moving. Everyone logged in sees it. Escalate to a manager immediately.

The `CST` / `Local` toggle at the bottom of the sidebar changes only how times are printed. Shifts are always Central Time: First 1:00–9:00 AM, Main 9:00 AM–5:00 PM, Third 5:00 PM–1:00 AM.

03 WORKING THE QUEUE

QC REVIEW Two cards per row on a wide screen, oldest first by default.

The control bar

CONTROL	WHAT IT DOES
Search	Truck number, trailer number or driver.
All shifts	Narrow to First, Main or Third — Central Time, always.
All employees	Review one team member's work in a run. Useful when you're coaching someone.
All statuses	Separate the first looks from the re-checks.

CONTROL	WHAT IT DOES
Oldest first	Leave it here. Oldest first is what keeps the floor's turnaround honest — and your own efficiency score depends on it.
Include awaiting scale ticket	Off by default. Turn it on to pre-read tickets that are still waiting on a scale ticket. You can't usefully approve them yet, but you can spot problems early.

The order to work in

- 1 Exception Reviews first** — red border. Somebody is blocked and waiting on your decision.
- 2 Resolved next** — a team member has already done the rework. Don't leave them hanging.
- 3 Pending QC, oldest first** — the default order. Just work down it.

TURNAROUND IS MEASURED

Your leaderboard efficiency is the average time from a ticket entering the queue to your verdict. Under 15 minutes scores full marks; every extra minute costs 10 points. Cherry-picking easy cards off the bottom of the list hurts you twice — it ages the hard ones and drags your average.

04 ANATOMY OF A REVIEW CARD

Every card is laid out identically. Learn it once and you can read one in about ten seconds.

Trailer Issue

REVIEW CARD Identity and telematics at the top, history in the middle, evidence and verdict at the bottom.

Top block — identity and telematics

FIELD	WHERE IT COMES FROM	WHAT TO WATCH FOR
Truck number + status badge	Typed by the team member.	Badges beside it: HAZMAT and LOT TRAILER .
Created	When the ticket was opened.	A long gap between this and now means a slow ticket.
MC	Selected by the team member.	Wrong carrier is why telematics fields come back blank.

FIELD	WHERE IT COMES FROM	WHAT TO WATCH FOR
Trailer #	Typed. You can edit this inline.	A magnifier next to the label opens Trailer Lookup — chapter 5.
Created by	The team member.	If it's <i>you</i> , see chapter 11.
Driver / Location / Model	Auto-filled from telematics, editable by the team member.	A dash means the truck wasn't found — usually the wrong MC.
Fuel	Captured once, at intake.	It does not update by itself. The circular arrow beside it pulls the live reading — use it before you judge anything fuel-related.
Weight	Free text. You can edit this inline.	pending scale is normal on a scale load.
Condition	Good / Fair / Damaged.	Anything but Good should have notes — and may deserve a trailer issue.

Middle block — the history trio

Three server-computed fields so you're never auditing a returning trailer blind:

Last PTI Date

The most recent known PTI for this trailer or truck, from any ticket. This is the field the 7-day LOT rule reads.

Last QC Approved

The last time *this trailer* passed QC on a different ticket.

Last Hauled By

The most recent *other* truck that pulled this trailer, and when. Trailer-scoped, not truck-scoped.

Evidence block

Saved trailer papers

Papers are saved against the trailer and follow it between pickups. The box always tells you which state it's in and never sits silently blank:

- No trailer linked — no trailer number on the ticket.
- Checking... — still loading.
- No papers on file yet for trailer X — genuinely none saved.
- Couldn't load — a network problem, not an empty record. Refresh before you judge.
- Links — open them and actually look at them.

Status chips

One row of chips summarising the checklist: green OK, red Missing, for Registration, Inspection, Sticker, BOL, PTI, ELD and Checklist, plus an amber KPRA chip naming the destination group when one was chosen.

A RED CHIP IS NOT AUTOMATICALLY A FLAG

Sticker: Missing is fine when Inspection: OK — only one of the two is required. ELD: Missing and Checklist: Missing don't block the gate at all, which is exactly why they end up in front of you: the system let them through, so it's your call whether they matter on this load.

PTI video log

The screenshot displays the UGL Trailer Check system interface. On the left is a sidebar with navigation links: New Pickup, Carryover (with a red notification badge), All Pickups, Notes, Trailer Issues (with a yellow notification badge), Leaderboard, My Pickups, QC Review (highlighted in red), and My Audits. The main content area is divided into two columns, each showing a PTI video log for a specific trailer.

Trailer 9 3318 (Left): Status is PENDING QC. Created Sep 20, 2026, 4:18 PM. Trailer # Q TRL-4412. Driver James Carter. Model 2021 Volvo VNL 860. Weight 41,250 lbs. Last PTI Date 09/20/2026. Last Hauled By 3318 (09/20/2026). The checklist shows: Registration: OK, Inspection: OK, Sticker: Missing, BOL: OK, PTI: OK, ELD: OK, Checklist: OK. A KPRA chip indicates TN/SC/NC/VA/NNV/MD/PA/VT/NH/NJ/AL/RI — 41R to center. The PTI video log shows 25/25 items noted (read-only).

Trailer 10 3318 (Right): Status is PENDING QC. Created Sep 20, 2026, 4:23 PM. Trailer # Q TRL-4412. Driver James Carter. Model 2021 Volvo VNL 860. Weight 41,250 lbs. Last PTI Date 09/20/2026. Last Hauled By 3318 (09/20/2026). The checklist shows: Registration: OK, Inspection: OK, Sticker: Missing, BOL: OK, PTI: OK, ELD: OK, Checklist: OK. A KPRA chip indicates TN/SC/NC/VA/NNV/MD/PA/VT/NH/NJ/AL/RI — 41R to center. The PTI video log shows 25/25 items noted (read-only).

Both logs include a list of 25 items: Side DOT Tape, Rear DOT Tape, No Placards Attached, Movable Mudflap (L), Movable Mudflap (R), Tires and Rims, Brakes and Suspension, Airlines, Front Clearance Light (L), Front Clearance Light (R), Side Marker Light (L), Side Marker Light (R), Side Clearance Light (L), Side Clearance Light (R), ABS Light, Turn Signal Light (L), Turn Signal Light (R), Brake Light (L), Brake Light (R), Plate Light, 3 Middle Rear ID Lights, and 2 Corner Rear ID Lights (L).

PTI VIDEO LOG Click the row to expand. Read-only — it is a record of what the team member saw, nothing more.

THE LOG NEVER GATES ANYTHING

The master PTI checkbox is what marks PTI as done. The 25-item log is context. A log reading 0/25 items noted alongside PTI: OK is a legitimate state — but it's also worth asking about, and that's a judgement call, not a rule the system enforces.

05 TRAILER HISTORY & LOOKUP

A trailer that's new to *this truck* may not be new to the fleet. Before you flag a stale or missing PTI, check whether another truck already did one.

1

Click the small magnifier next to the **Trailer #** label. A **Trailer Lookup** popover opens, pre-filled with the trailer currently on the ticket.

2

You can type *any* trailer number in the box — useful when you suspect a typo and want to see what the corrected number actually belongs to. Press **Check**.

TRAILER LOOKUP Registered PTI date and the truck that last hauled it. Apply to Ticket is manager-only.

3

Read the two results:

- **Registered Last PTI** — the date stored against that trailer.
- **Last hauled by** — the truck and date of its most recent other pickup.

Apply to Ticket is greyed out for you: “*Manager privileges required to apply this correction.*” If the registered date is genuinely wrong, get a manager — they can correct it in place from the card, and the correction is written against the *trailer*, so it shows up everywhere that trailer appears next.

WHY THIS MATTERS

Without this, a perfectly current trailer that arrived behind a different truck looks like a missing PTI, and you flag a team member who did nothing wrong. Check the history before you spend somebody's points.

06 THE FOUR VERDICTS

Every card ends in one of four actions. Picking the right one is most of this job. Work down this ladder and stop at the first that fits.

APPROVE

Everything checks out.

The paperwork is there, legible, and consistent with the telematics and the weights. Tick the three confirmations and approve. The creator gets +10.

FIX IT YOURSELF

A small, objective typo you can see the right answer to

— a mistyped trailer number, a weight that's obviously a slip. Correct it inline and approve. No flag, no penalty, no round trip.

TRAILER ISSUE

The trailer is broken, but nobody made a mistake.

Cracked mudflap bracket, bent landing gear. File the issue and then still approve or flag the ticket on its own merits.

FLAG

The team member missed something they should have caught

, or you need real-world work done that only they can do. Pick the categories, write what you need, send it back.

THE TEST THAT SEPARATES A FIX FROM A FLAG

Ask: *can I see the correct answer from here?* If yes, fix it. If the correction needs somebody to go and look at a trailer, re-shoot a photo, re-weigh a load or post in the group — flag it. Never flag something you could have fixed in four seconds; never quietly "fix" something you're actually guessing at.

07 FIXING IT YOURSELF

Two fields on every card are live inputs, not labels: **Trailer #** and **Weight**.

INLINE EDIT Click the value, type, then press Enter or click away. It saves only if you changed it.

1

Click the value. It's already an input — no edit button to find.

2

Type the correction.

3

Press Enter or click away. It saves immediately, and only if the value actually changed.

CORRECTING A TRAILER NUMBER IS NOT A SMALL ACT

The trailer record carries the saved papers. The system is built to rename the existing trailer in place so its papers follow — unless the number you typed already belongs to a *different* known trailer, in which case the ticket re-links to that trailer and its papers instead. That's the right outcome for a typo fix. It is the wrong outcome if you were guessing. Use Trailer Lookup first.

Refreshing fuel

Fuel % is captured once, when the pickup was created, and never updates on its own. The circular arrow next to it pulls the live reading from telematics. Use it before you judge anything that depends on fuel — and remember the team member's axle-balance plan may have assumed a full tank.

08 APPROVING

Approval is deliberately slower than one click. Three boxes, each a separate thing you are putting your name to.

1

Press **Approve Ticket**. A confirmation box opens with all three boxes empty and **Confirm Approval** greyed out.

THREE CONFIRMATIONS Confirm Approval stays disabled until all three are ticked. There's no way around it.

2

Tick each one only when it is actually true:

CONFIRMATION	WHAT YOU ARE ASSERTING
Data matches Samsara/Telematics	Driver, location and model on the card match the live feed — or the team member's override is right and you know why.
Weights are within legal bounds	The recorded weight is plausible and, on a scale load, the scale ticket backs it up. Steer 12,000 / drive 34,000 / trailer 34,000.
Documentation is visually confirmed	You opened the papers and looked at them. Not "the chip is green" — you looked.

ALL THREE TICKED Confirm Approval goes green and becomes clickable.

3

Press **Confirm Approval**. The card leaves the queue and a green line confirms who got the credit.

APPROVED The +10 goes to whoever created the ticket, not to you.

THE THREE BOXES ARE THE POINT

They exist to stop rubber-stamping. Ticking them without doing the checks is the one failure mode this whole system can't catch — every approval is permanently logged with your name, the time and the ticket.

APPROVAL DOESN'T CLEAR THE SCALE CHASE

If the load needed a scale and the scale ticket hasn't been received, the row stays on the Carryover board after you approve it, marked **APPROVED – SCALE PENDING**. That's correct. Somebody still has to chase the ticket.

09 FLAGGING

A flag sends the ticket back to the team member's Carryover board with your reasons attached, and costs them score. Be specific and be fair.

The screenshot displays two side-by-side ticket review cards in the UGL system. The left card is for ticket 9034, dated 09/20/2026, with a status of 'PENDING QC'. The right card is for ticket 48810, dated 08/29/2026, with a status of 'PENDING QC'. Both cards show a checklist of items (Registration, Inspection, Sticker, BOL, PTE, ELD) and a 'Flag' button. The right card also shows a 'Trailer Issue' button and a section for 'Error categories' with checkboxes for various issues like 'Missing inspection', 'Missing registration', 'PTI - video wasn't with the light test', etc. There is also a 'Submit Flag' button at the bottom of the right card.

FLAG FORM Opens inside the card. Categories, notes, urgency and proof, then Submit.

Step 1 — Pick every category that applies

Tick all of them, not just the worst one. One flag can carry several categories, and each one is recorded and penalised separately.

CATEGORY	USE IT WHEN	COSTS THEM
Missed PTI	No PTI was done, or it was marked done without one.	–20
Missing BOL	No bill of lading, or it was ticked without one.	–15
Missing Registration	No registration on file or in hand.	–15
Missing Inspection	No inspection paper <i>and</i> no sticker.	–15
PTI — video wasn't with the light test	The PTI video skipped the lights.	–15
Incorrect weight	The recorded weight doesn't match the scale or what the driver reported.	–10
Missing sticker	Sticker claimed but not visible or not legible.	–10
Didn't remind the driver about KPRA law	Destination group needed a reminder and none was given.	–10
Didn't text in the group	Load moved with nothing posted in the group chat.	–1 to –10 (you choose)
Other	Anything else. Notes become mandatory.	–5

Step 2 — Two categories change the form

“Didn't text in the group”

A **Communication failure severity** slider appears, 1 to 10, defaulting to 5. **The number you pick is the penalty.** 1 for a late post, 8–10 for a load that left with nothing said at all.

“Other”

Notes stop being optional. Describe the problem or the form won't submit.

SEVERITY SLIDER Only appears for “Didn't text in the group”. The value is the penalty.

Step 3 — Write the note

The note is the only part of a flag the team member can act on. A category tells them *what*; the note tells them *what to do next*.

Good

“Sticker photo never came through, and nothing was posted in the group when this load left. Re-shoot the sticker and post it.”

Useless

“Incomplete.” / “Fix this.” / “See categories.”

Step 4 — Urgent, or not

The screenshot displays the UGL QC Review interface. On the left, a sidebar lists navigation options: New Pickup, Carryover, All Pickups, Notes, Trailer Issues, Leaderboard, My Pickups, QC Review (highlighted), and My Audits. The main content area is divided into two panels. The left panel shows a 'QC Review' section with a 'READY TO SUBMIT' status. The right panel shows a 'Flag' section with a 'Urgent Flag (Global Visibility)' toggle turned on. The 'Urgent Flag' section includes a 'Proof (pictures / videos)' section with an 'Upload file' button and a text input field for a media URL. Below this is a 'Submit Flag (2 issues)' button.

READY TO SUBMIT Urgent turned on — the row goes red to make sure you meant it.

WHAT URGENT ACTUALLY DOES

A normal flag is visible only to its creator, QC and managers — that's **mistake privacy**, and it's deliberate. Turning on Urgent throws that away: the ticket appears on *every* team member's Action Required board with a pulsing badge, and whoever fixes it earns a +5 teamwork bonus if they didn't create it. Use it when the load is moving and it can't wait for one person — not to make a point.

Step 5 — Attach proof

Upload file or paste a media URL and press **Add URL**. Images and videos are detected from the file extension. A screenshot of the illegible sticker ends the argument before it starts.

Step 6 — Submit

The screenshot shows the UGL QC Review interface. On the left is a sidebar with navigation items: New Pickup, Carryover, All Pickups, Notes, Trailer Issues, Leaderboard, My Pickups, QC Review (highlighted), and My Audits. The main area is titled 'QC Review' with a subtitle 'Pending and resolved tickets awaiting audit'. There are filters for 'Search truck #, trailer # or', 'All shifts', 'All employees', 'All statuses', and 'Oldest first'. A notification bar at the top says 'Truck 7712 flagged (Missing sticker, Didn't text in the group) — sent back to jmartinez's Carryover dashboard.' Below this are two ticket cards. The first card (1 2277 B) is marked 'RESOLVED' and shows details for a trailer (LOT-1001) created on Sep 4, 2026, 3:59 PM by jmartinez. It lists various inspection items: Registration: OK, Inspection: OK, Sticker: OK, BOL: OK, PTI: OK, ELD: Missing, Checklist: Missing, and KPRA: CA/FL — 40ft to center. It also has a note about a missing sticker. The second card (2 9034) is marked 'PENDING QC' and shows details for a trailer (LOT-1002) created on Sep 4, 2026, 4:00 PM by jmartinez. It lists various inspection items: Registration: OK, Inspection: Missing, Sticker: OK, BOL: OK, PTI: OK, ELD: Missing, and Checklist: Missing. Both cards have buttons for 'Approve Ticket', 'Flag', and 'Trailer Issue'.

FLAGGED The confirmation names the categories and the team member it went back to.

The card leaves your queue. The team member gets a red pop-up within about fifteen seconds and a red badge on their Carryover item. When they resend it, it comes back to you as **RESOLVED**, carrying a purple panel with your original flag and note so you can check exactly what you asked for.

10 TRAILER ISSUES

For a real problem with the equipment that isn't anybody's mistake. This is the tool that stops you having to choose between blaming someone and saying nothing.

1

Press **Trailer Issue** on the card. A box opens inside it.

TRAILER ISSUE The form says it plainly: this does not affect the team member's score.

2

Describe what a mechanic would need to know — *“Rear passenger-side mudflap bracket is cracked — not the team member's miss, but shop needs to see it before the next load.”* At least three characters, but write a real sentence.

3

Press **Report Issue**. It goes to the whole team's Trailer Issues board and nudges the floor about every two hours until someone marks it resolved.

IT ISN'T AN AUDIT VERDICT

Because it's a report and not a judgement, a trailer issue carries no score penalty, doesn't block approval, and is available even on a pickup *you* created. Filing one and then approving the same ticket is a completely normal outcome.

ISSUE OR FLAG?

The trailer is broken → trailer issue. The team member didn't notice the trailer was broken, or logged it as Good → that's a flag, and you can file the issue as well. Both, when both are true.

11 EXCEPTIONS & CONFLICTS

Exception Review — when a team member can't fix it

A flagged ticket the team member genuinely can't resolve comes back to you as an **Exception Review**: red border, their mandatory written reason at the top, the flag history below, and Approve relabelled **Force Approve**.

The screenshot displays the UGL system interface with three tickets. The top-right ticket (6688) is an 'Exception Review' with a red border. It shows a reason for the exception: "Trailer left the yard before we could photograph the registration. Owner-operator is unreachable until Monday." Below this is a 'Flag history' section showing a 'Missing registration' flag. The bottom-left ticket (3318) is a standard 'QC Review'.

EXCEPTION REVIEW The team member's reason verbatim, the original flag beneath it, and your two options.

Force Approve

You accept the exception. The ticket closes with their explanation permanently on record. Use when the reason is genuine and the load can't wait.

Flag it again

You reject the escalation. It clears the exception and restarts the normal fix loop. Use when the reason is vague, or when it plainly could be fixed.

READ THE REASON, NOT JUST THE FACT OF IT

"Trailer left the yard before we could photograph the registration; owner-operator unreachable until Monday" is a real constraint. "Couldn't get it" is not. Force Approve puts your name on accepting that explanation, so hold it to the standard you'd want applied to your own.

Your own pickups — conflict of interest

QC creates pickups too. You can **never** approve or flag a ticket you created. Approve and Flag are replaced by a plain notice.

The screenshot shows the UGL application interface. On the left is a sidebar with navigation links: New Pickup, Carryover, All Pickups, Notes, Trailer Issues, Leaderboard, My Pickups, QC Review (highlighted), and My Audits. The main content area displays a pickup card for a Freightliner Cascadia. The card includes fields for Weight (41,250 lbs), Condition (Good), Last QC Approved (No prior record), and Last PTI Date (09/20/2026). It also shows a list of inspection items: Registration: OK, Inspection: OK, Sticker: Missing, BOL: OK, PTI: OK, ELD: OK, and Checklist: OK. A note indicates 'No papers on file yet for trailer TRL-4412'. Below the inspection items, there is a 'PTI video log — 25/25 item(s) noted (read-only)' section. At the bottom of the card, there is a 'Trailer Issue' button instead of 'Approve' or 'Flag'. The card is marked as 'PENDING QC'.

YOUR OWN PICKUP “Your pickup — another QC or a manager must audit it.” Only Trailer Issue remains.

THIS IS ENFORCED ON THE SERVER, NOT JUST HIDDEN

There is no workaround, no admin toggle, and no way to do it from another page. Another QC user or a manager has to audit it. Managers are exempt from this rule; you are not. **Trailer Issue** stays available, because a report about broken equipment isn't a verdict on yourself.

5	Sep 4, 2026, 3:59 PM	2277 B	AL Amin	jmartinez	RESOLVED	Missing sticker

FLAGGED TAB Every category you cited, plus where that ticket ended up.

The **Current state** column is the useful one. A flag you raised that's still sitting at **FLAGGED** days later is a ticket nobody has picked up — chase it, or raise it in the handover.

How QC is scored on the leaderboard

Accuracy — 70%

Fixed at 100 for QC. There is no counter-signal in the system that could fairly mark a reviewer down, so it doesn't pretend to have one.

Efficiency — 30%

Average time from a ticket entering the queue to your verdict. Under 15 minutes scores 100; every extra minute costs 10 points.

Volume multiplier

Approvals plus flags. Reaches full weight at 50 actions, so a handful of reviews can't outrank a full shift's work.

YOUR SCORE DOES NOT REWARD APPROVING

Approvals and flags count identically toward volume, and accuracy is fixed. There is no mathematical incentive to wave things through — only turnaround is measured. Take the time a card needs.

You also have a score pill of your own, top right, because you create pickups too. That one follows the same rules as everybody else: +10 when a ticket *you* created is approved, and penalties if one gets flagged.

13 QUICK REFERENCE

Reviewing one card

- 1 Read the status badge. **RESOLVED** → read the purple “previously flagged” panel first and check only that the fixes landed.
- 2 Check the history trio — Last PTI, Last QC Approved, Last Hauled By. Open Trailer Lookup if the PTI looks stale.
- 3 Open the saved papers and actually look at them.
- 4 Read the status chips. Remember: inspection *or* sticker; ELD and Checklist never gated.
- 5 Expand the PTI video log if the load or the trailer gives you any reason to.
- 6 Refresh fuel if anything depends on it.

7 Fix what you can see the answer to. File a trailer issue if equipment is broken.

8 Approve (three boxes) or Flag (every category, a real note, proof).

Quick answers

SITUATION	DO THIS
Sticker missing but inspection OK	Fine. Only one of the two is required.
ELD or Checklist missing	Your call — neither blocks the gate. Flag only if it mattered on this load.
PTI log reads 0/25 but PTI: OK	Legitimate. The master box is what counts. Ask if the load warrants it.
Last PTI Date looks stale on a LOT trailer	Trailer Lookup first — another truck may have done one. Get a manager to correct the date if it's wrong.
Driver and location are dashes	Truck not found in that carrier's fleet — usually the wrong MC. Not automatically a flag.
Papers box says “couldn't load”	A network problem, not an empty record. Refresh before judging.
Trailer is damaged, team member logged it honestly	Trailer issue. No flag.
Trailer is damaged, team member logged “Good”	Trailer issue <i>and</i> a flag.
Weight is an obvious typo	Fix it inline and approve.
Weight might be wrong but you can't tell	Flag — Incorrect weight. Don't guess.
It's your own pickup	You can't audit it. Another QC or a manager must.
Exception Review with a vague reason	Flag it again and ask for specifics.
Full-width red hazmat bar	Escalate to a manager immediately. Don't just dismiss it.

Rules that never bend

- You can never approve or flag a pickup you created.
 - All three confirmation boxes, every approval, with the checks actually done.
 - Every flag gets a note that says what to do next.
 - Trailer issues cost nobody any points — use them freely, they're the right tool for broken equipment.
 - Urgent removes mistake privacy from the whole floor. Mean it when you use it.
 - **Apply to Ticket** in Trailer Lookup is manager-only. Get a manager; don't work around it.

UGL Trailer Check — QC Auditor Handbook. Screenshots taken from the live application with practice data. If the app and this book disagree, the app is right — tell your manager so this can be corrected. Pickup-side pages (New Pickup, Carryover, Notes) are covered in the Team Handbook, and they apply to you too.
